

ARUNESH DWIVEDI

DevOps & Platform Engineer – AWS · Kubernetes · Terraform · Go

Pune, India · +91 63754 64347 · arunesh.devops@gmail.com

github.com/AruneshDwivedi · linkedin.com/in/aruneshdwivedi · aruneshdwivedi.github.io

DevOps engineer with 1+ years running production infrastructure at Ole Solutions – provisioning, incident response, and automation on Yandex Cloud. Built an automated pipeline that reviews and ships fixes into open-source Kubernetes tooling (Argo Rollouts, Kong, VictoriaMetrics, and others), with 28 PRs merged so far. AWS Certified Solutions Architect – Associate, M.S. in AI & Cloud Computing.

EXPERIENCE

DevOps Engineer

June 2025 – Present

Ole Solutions, Pune, India (Remote)

- Built Bash and Python automation for provisioning, deployment, and health-check workflows, replacing manual runbook steps with repeatable scripts and cutting hands-on effort per release.
- Administered client cloud infrastructure on Yandex Cloud end to end: server provisioning, SSH key and sudo access control, deployment validation, and DNS, firewall, and routing configuration.
- Ran incident response on live client systems: triage, root-cause analysis via systemd service state and journald/syslog inspection, remediation, and post-incident write-ups that fed back into the automation.
- Established the operational baseline on each engagement by hardening access policies and service configuration, and authored the runbooks that made recurring fixes repeatable process rather than tribal knowledge.

Software Development Intern

May 2023 – Aug 2023

Itgeo, Russia

- Built backend features in Python on a distributed Agile team; containerized dev environments with Docker and automated local setup with shell scripting.
- Diagnosed application issues through debugging, log analysis, and environment validation during development and testing.

SYSTEMS & AUTOMATION PROJECTS

AI-Assisted OSS Contribution Pipeline (personal project)

- Designed and built a two-phase automation pipeline – autonomous draft, then manually triggered, human-reviewed publish – that finds bugs in open-source infrastructure tooling, implements Go fixes, and submits them upstream under mandatory human review.
- Pipeline has produced 28 merged pull requests across 25+ production infrastructure projects, including Argo Rollouts, Kong, Apache Solr Operator, APISIX Ingress Controller, VictoriaMetrics Operator, OpenSearch k8s Operator, Buildkite CLI, ClickHouse Operator, helm-unittest, and Porter – mostly fixes that turn silent failures and panics into structured, actionable errors.
- Representative fixes reviewed and shipped: Apache Solr Operator rolling-update logic that mishandled already-deleted pods, unblocking safe restarts for stateful workloads; an Argo Rollouts anti-affinity nil-check that eliminated a controller panic halting progressive delivery; Buildkite CLI cluster-secret listing corrected to paginate instead of truncating results.
- Rebuilt the pipeline's review model after identifying that an earlier version wasn't transparent enough for open-source norms – added a post-submission CI monitoring loop and shifted to disclosure-by-default, human-gated submission.

Scalable Three-Tier AWS Infrastructure Terraform · VPC · ALB · RDS

terraform-aws-scalable-webapp

- Multi-AZ architecture composed from reusable Terraform modules (network, compute, ALB, RDS); diagnosed and documented live deployment failures across ALB routing, EC2 user_data, and security group rules.

Kubernetes Deployment & Monitoring Stack Kubernetes · Helm · Prometheus

k8s-production-deployment

- Containerized service deployed via Helm behind NGINX Ingress; validated HPA scaling from 2 → 5 replicas under load, with Prometheus and Grafana dashboards for cluster and application health.

Jenkins CI/CD Pipeline on AWS Jenkins · Terraform · Ansible

aws-nodejs-cicd

- End-to-end pipeline covering automated provisioning, configuration management, deployment, and one-step rollback to the last known-good release.

TECHNICAL SKILLS

- **Cloud (AWS):** EC2, VPC, IAM, ALB, Auto Scaling, RDS, S3, CloudWatch, Route 53
- **Infrastructure as Code:** Terraform (modules, state, reusable environments), Ansible
- **Containers & Orchestration:** Docker, Kubernetes, Helm, NGINX Ingress, Horizontal Pod Autoscaler
- **CI/CD & Observability:** Jenkins, GitHub Actions, Git · Prometheus, Grafana, CloudWatch Logs
- **Languages & Systems:** Go, Python, Bash · Linux administration, DNS, TCP/IP, routing, security groups

EDUCATION

M.S., Artificial Intelligence & Cloud Computing · Lobachevsky State University, Russia

2023 – 2025

B.Tech., Computer Science & Information Technology · Lobachevsky State University, Russia

2019 – 2023

Graduated in the top 10% of class across both programs.

CERTIFICATIONS & COMMUNITY

AWS Certified Solutions Architect – Associate · AWS Community Builder, Machine Learning (2024) · Technical writing on cloud and DevOps fundamentals at kushald.hashnode.dev
